FC roller technology

- The RCF 3 robotic mop works with Kärcher's proven roller technology, which ensures particularly thorough wet cleaning of hard floors.
- Light, dry dirt, e.g. dust fluff, small crumbs or road dirt, is picked up directly during wet mopping and collected with the used wiping water in the dirty water tank.
- The roller technology with continuous cleaning of the roller and the 2-tank system ensure optimum results even on larger areas, as you always work with a clean roller.

2-tank system with filling level indicators

- With clever 2-tank system: the microfiber roller is constantly moistened with fresh water from the fresh water tank. The used water and dirt are collected in the 2nd tank.
- The tank filling level indicators show whether the dirty water tank is full or the fresh water tank is empty. In both cases, the robot interrupts its work and returns to the charging station.
- The display is indicated via LEDs directly on the cleaning robot and also via a notification in the app.

Carpet detection and avoidance

- The RCF 3 automatically detects carpeted surfaces using an ultrasonic sensor and shows these on the map in the app.
- During cleaning, the robot drives around the carpets with a clever driving strategy and prevents them from getting wet.
- If required, the carpet avoidance can also be deactivated via app, so that the robotic mop runs over all surfaces - even low-pile carpets.
